LOREBOARD

TECHNICAL REPORT — MAINNET ARCHITECTURE

March 2026 — FOID Foundation × Fluent

EXECUTIVE SUMMARY

Loreboard has been rebuilt from the ground up for mainnet. Five overlapping legacy contracts have been replaced by a single unified contract that implements the complete governance loop: propose → vote → permanent placement → NFT update. All voting is now direct on-chain. No more off-chain signature collection. No more SQLite. No more EIP-712 batch signing. One contract. One payment. One board.

THE LOOP

CONTRACT ARCHITECTURE

CONTRACT	ADDRESS	ROLE	STATUS
Loreboard	0xF9b72062...E0eC7	Propose, vote, finalize, placement, manifest, removal	VERIFIED
LoreboardLiveNFT	0x9E17B30a...49012	1/1 ERC-721 board NFT, auto-updates on manifest change	VERIFIED
StreakVotingPower	0x7a889b3d...C03e	Prayer streak → tier multiplier → vote weight	VERIFIED
PrayerTiers	0x36ED105e...D4fb	10-tier streak system (1x–5x multiplier)	VERIFIED
FoidMultisig	0x2379955b...6Ed	2-of-3 multisig, owns Loreboard, emergency removal	VERIFIED

GOVERNANCE MECHANICS

PARAMETER	VALUE	NOTES
Approval threshold	51% weighted	Cross-multiply math, no division rounding
Voter quorum	3 unique wallets	Prevents self-approval
Voting window	72 hours	Configurable by multisig
Submission fee	0.001 ETH	Non-refundable, forwarded to fee recipient
Finalization	Permissionless	Anyone can call after window — no operator dependency
Overlap prevention	On-chain	Enforced at propose() and finalize() — O(n) AABB check
Grid	32px tiles, max 400 cells	Infinite canvas (negative coordinates supported)

VOTING POWER: PRAYER STREAK → INFLUENCE

STREAK	TIER	MULTIPLIER	WEIGHT	WITH MIFOID
0 days	Unranked	1x	100	150
3 days	NPC	1.25x	125	175
7 days	Tapped In	1.5x	150	200
14 days	Locked In	1.75x	175	225
21 days	Certified	2x	200	250
30 days	Undeniable	2.5x	250	300

STREAK	TIER	MULTIPLIER	WEIGHT	WITH MIFOID
45 days	Built Different	3x	300	350
60 days	Inevitable	3.5x	350	400
75 days	Transcendent	4x	400	450
90 days	Mommy Milker	5x	500	550

CONTENT MODERATION (V1)

NFT INTEGRATION: THE EVER-EVOLVING BOARD

FRONTEND MIGRATION: WHAT CHANGED

COMPONENT	BEFORE	AFTER
Vote mechanism	EIP-712 signature → SQLite → batch finalize	Direct on-chain castVote()
Vote storage	SQLite database (ephemeral on Render)	On-chain mappings (permanent)
Finalization	Operator-only, 5 args (voters, approvals, deadlines, sigs)	Permissionless, 1 arg (proposalId)
Threshold	60%	51% + 3-voter quorum
Placement	Voucher → claim → nothing (dead end)	Direct on-chain recording at finalize
Overlap check	Frontend-only (bypassable)	On-chain at propose() + finalize()
Manifest	Epoch-based, separate ManifestStore contract	Built into Loreboard, with history + staleness check
NFT update	Disconnected from voting contract	Loreboard implements NFT interfaces directly

COMPONENT	BEFORE	AFTER
Contract count	5+ overlapping contracts	1 unified Loreboard contract

SECURITY MODEL

TEST COVERAGE

MAINNET READINESS

THE LINE

Loreboard turns culture into status and status into access.
The community decides what gets built here.

FOID is the first city. Loreboard is the zoning law.
